

CLAIMS:

1. In connection with a process of preparing an air bag by laying a pair of base fabric pieces impregnated and/or coated with silicone rubber one on the other, with the impregnated or coated surfaces of the pieces inside, and joining peripheral portions of the pieces together to form a bag,

a silicone rubber composition for use as a sealer to be applied to the peripheral portions of the base fabric pieces, the composition comprising a compound having the general formula (1):

wherein R^1 is an alkylene radical having 1 to 6 carbon atoms and R^2 is a methyl, ethyl or propyl radical.

2. The silicone rubber composition of claim 1, comprising

(A) 100 parts by weight of an organopolysiloxane containing on average at least two silicon atom-bonded alkenyl radicals in a molecule,

(B) an organohydrogenpolysiloxane containing at least two silicon atom-bonded hydrogen atoms in a molecule, in an amount to give 0.5 to 5.0 silicon atom-bonded hydrogen atoms per alkenyl radical in the organopolysiloxane (A),

(C) a catalytic amount of a platinum group metal catalyst, and

(D) 0.1 to 10 parts by weight of the compound of formula (1).

3. The silicone rubber composition of claim 2, further comprising (E) 0.01 to 5 parts by weight of a titanate acid ester per 100 parts by weight of the organopolysiloxane (A).
